Overview

Our History... Founded in 1997, Arizona Research Center conducts clinical research projects in conjunction with the nation's leading pharmaceutical companies. Arizona Research Center participates in FDA-approved clinical trials which test new medications and medical devices prior to public availability. Located in Phoenix, Arizona Research Center is an 8000 square foot facility encompassing 15 patient exam rooms, internal radiology capabilities, 3 physicians, and a staff of 25. Growing involvement in cutting-edge medical discoveries and our passion and dedication in this arena has made Arizona Research Center one of the nation's leading clinical research centers.

Our Foundation... Joseph S. Gimbel, a Principal Investigator and the Medical Director of Arizona Research Center, is a board-certified orthopaedic surgeon licensed to practice in Arizona and California. Dr. Gimbel is active in Phoenix Orthopaedic Surgeons as well as Phoenix Spine Consultant, and has practiced in the Phoenix metropolitan area for over 25 years. Jeannine Duffield is the Site Director for Arizona Research Center and has over 9 years of experience working in the pharmaceutical research industry.

Our Structure... Framed by a strong team-oriented structure and supported by a multi-tiered group of individuals experienced in the clinical research industry, Arizona Research Center's organization contributes to the success of our clinical research trials. Our Regulatory Specialists ensure a rapid start-up of the clinical research trials in which we participate, and are diligent in maintaining all regulatory documents throughout the life of those studies. Inpatient and outpatient teams of Clinical Research Coordinators lead by a Research Clinic Manager overseeing quality assurance conduct clinical trials with the Arizona Research Center mission statement in mind: To conduct quality clinical research in an environment that supports the highest level of patient care. Under the supervision of our Principal Investigators, our staff complies with the required Good Clinical Practice Guidelines, the Code of Federal Regulations, and with the guidelines designated by the Declaration of Helsinki to insure that each participant's health and well-being are always the first priority when treating with an investigational drug or device.

Our Approach... Arizona Research Center takes a multi-specialty approach to clinical trials. By networking with physicians in a variety of specialties in the valley, Arizona Research Center often meets and exceeds the enrollments needs of the studies we conduct. Our site takes pride in its ability to meet the enrollment accrual goals of pharmaceutical companies while maintaining a high level of excellence in the data collection process.

Our Passion... Participation in a clinical research trial provides both patients and physicians the opportunity to access new and exciting pharmaceutical products years before they reach the market. These products can be palliative, therapeutic, preventative, and even life-saving in the treatment of a variety of medical conditions. Our passion in the clinical research field pushes us to excel in the clinical research trials we conduct, with hopes of making a difference in the present and future of individual lives.

Mission Statement

"Conduct quality clinical research in an environment that supports the highest level of patient care."
